

# Restructure

SYSTEM  180

# Modularity of the individual parts

The main elements of System 180 furniture are made of stainless steel tubing and black coloured medium density fibreboard (Mdf). The stainless steel tubes are formed into emission-free components that can be screwed together directly, creating the stable basic structure of the furniture.

The Mdf panels, which are coated with various decors, are processed into components on woodworking centres. These components are used to fill the surfaces of the basic structure as required and to extend the compartments with the desired functions.

# Design and structure

The dimensions of the components are based on a grid of 180 millimetres. This means that the geometry of the furniture can be determined according to functional needs and spatial conditions. Due to the modularity of the construction system, furniture can be subsequently changed at any time and thus adapted to a changed functional need or a new spatial situation. Due to the standardisation

of the components, surplus components can be used elsewhere and newly required components can be easily added. Damaged components can be repaired or refurbished in the factory. Due to the high stability of the basic structure, furniture castors can also be added later, for example to transform fixed shelving units into mobile room dividers.

# Accessoires and extensibility

The compartments of the basic structure can be fitted with shelves, doors, pull-out shelves, suspension files, brochure flaps, magazines and coat rails. These functional accessories are screwed to the side panels that are universally prepared for this purpose. This means that the accessories can also be retrofitted and new functions added.

The rewritable, magnetic and pinable FlexBoard Pro can be attached directly to the basic structure by means of profiles added for this purpose. The FlexBoards Pro can thus also be used as mobile units across different furniture.

The modular approach and the ability to dismantle the individual parts offer a high degree of flexibility in adapting to changing spatial and functional requirements and enable good reparability and reusability. In combination with the clear, functional and timeless design, a high level of durability of the System 180 furniture is guaranteed.

# HeyCar

heycar is the somewhat different used car exchange. The team of the start-up founded in 2017 has set itself the goal of making the search for a new used car faster, easier and safer than ever before. That's why you'll only find the best vehicles at heycar: put through their paces by selected quality dealers, maximum 8 years old, less than 150,000 km mileage and with guarantee.

In 2018, minimum Projekt receives the order to develop a furnishing concept for the start-up initiated by Volkswagen Financial Services. Under the title “heyvillage”, the team develops a tailor-made multispace concept in the old Quelle department store in Berlin’s Wedding district. Based on a novel consulting and planning approach, 3,500 sqm of space, spread over 3 floors, will be used to create type-appropriate workplaces for around 250 employees. Already in November 2018 the first floor could be occupied. The project should be completed in 2019.

minimum develops the spatial concept in several layers around the central atrium. The sluice between the inner and outer zones forms a multifunctional, ceiling-high shelf structure that can be used on both sides. With black pipes and surfaces, the structure appears elegant despite its stately dimensions. In the base there are lockable compartments for the private objects of the employees. Above the lockers, the structure becomes airy and serves as a screen, support for whiteboards, plants or decorative exhibits.

In the outer ring, desktop workplaces, meeting rooms, telephone booths and the coffee lounge are arranged along the windows. A special highlight is the mobile arena. Four circular segments, each with three steps, serve as grandstands for presentations, unofficial meetings or for the joint film event. High-quality acoustic curtains can be used to visually and acoustically screen individual zones if required. Carpets with net structure and open ceilings with visible building services underline the identity of a digital company.

A coordinated colour concept ensures tranquillity in the area and sets luminous highlights in the network zones. The large-format tapeart is a privacy screen for the meeting booths and an emotional mission statement.

We congratulate on an unconventional design concept, thank the minimum team for the great cooperation and look forward to the further construction phases.

# The Vield

**THE VIELD** is an Offsite Innovation Space outside of Berlin. The Space is completely geared towards the needs of teams and cooperative work and is therefore unique in concept and location. Based on extensive user research, **THE VIELD** was designed to be flexible and open and offers various workstations for workshop formats and sleeping facilities for 20 team members. **THE VIELD's** goal is to promote and challenge new ways of thinking and working concepts through a new, modern setting.

**THE VIELD** aims to break out of the old structures and break new ground. In the conceptual and methodical work in the team, previously hidden resources and talents, possibilities and ways open up.

With a broad network of coaches and consultants, as well as years of experience in supporting a wide variety of companies, **THE VIELD** also offers the opportunity to be accompanied in terms of content and fully comprehensive, even outside the location.

In addition to being used as a team offsite space, **THE VIELD** is a place where conferences, open workshops, bar camps, hackathons and networking events on the topic of new work will take place. Away from the big city, ideas literally find space here. The equipment of **THE VIELD** was exclusively realized in partnerships with high-quality companies.

Location:	Vieltzsee
Realisiert:	2020

# dena

Since 2008, EUREF AG has been developing its campus at the Gasometer in Schöneberg as a “real laboratory of the energy turnaround” and has already been meeting the German government’s CO2 climate targets for 2050 since 2014.

The German Energy Agency dena has recently become part of the innovative community of business and science that has settled on the EUREF campus.

Our sales partner minimum Projekt and mintdesign were commissioned to design the interior of dena’s new offices with a focus on sustainability, flexibility and efficiency. The synergistic concept of the campus is represented in the overall interior design concept of the furniture used.

On the one hand, DT-Line tables enable agile work in flexible constellations for dena teams. On the other hand, our furniture found its place in the design of minimum as reception counters, shelves and and our new Locker cabinets.

Together with furniture from other manufacturers, a successful working environment has been created that meets current requirements in terms of ergonomics, room acoustics and lighting design and interprets them in a contemporary way.

# EBR Projektentwicklung

As a holistic urban developer in the economic region of Göttingen, Hanover and Kassel, EBR pursues one goal – the city of tomorrow. The company’s strengths lie in the creation and management of visionary real estate projects. Sustainability was a core consideration, driving both the selection of the new office landscape of the EBR in a revitalized industrial wasteland, as well as the creation of a suitable framework for a New Work working world.

In cooperation with interior designer Susanne Philippson, the redesigns’ goal was defined as offering various room options that can be flexibly used by employees. Different areas enable concentrated work, provide space for creativity and encourage communication. Desk sharing enables agile working methods and facilitates communication in interdisciplinary, sometimes virtual project teams.

System 180’s almost ceiling-high room structures provide privacy and general storage space, while agile work and communication are encouraged by the high desks, an inviting lounge area and the functional workshop concept. In addition, there are System 180 containers in which employees can store their work documents and notebooks to move between workstations and different rooms.

# The furniture system

System 180 furniture can be customised, according to formal requirements and practical needs, for a wide variety of tasks. You can find a short overview of the most important options here. Your local specialist partner can show you the complete spectrum of options.

## Storage Space

The furniture system allows you to custom-build shelving, doors, drawers, magazine racks and other specialised accessories into your furniture, entirely according to your needs.

## Partitions

With 7 widths, 6 heights, 7 depths and 13 decorative finishes to choose from, you are completely free to shape the larger spaces in your office into your own structures with precisely the dimensions you need, and to create new spaces for other tasks, such as seating or display platforms for decorative objects or plants. The use of sturdy casters allows even large structures to be moved around easily on even surfaces.

## Reception

The furniture system shows off its strengths to the full when used to create check-in counters. Whether you need an I, L or U-form counter, the clear structure of your reception desk will welcome your visitors with its attractive, high-end appearance. You can integrate workstations in the space behind the counter with a flexibility that lets you cater for many needs.

# The desk system

## Foldable tables RackPod

The RackPod-Series is our smart range of tables for mobile working. Thanks to its foldable frame and the optional casters, tables in the RackPod range are simple to assemble, easy to move around your space and can be stowed away quickly when not in use. The optional accessories can be fitted with no need for tools, and allow you to store away your technical devices and other working materials neatly and practically

## BridgePro

The BridgePro table programme offers versatile models for a mobile working environment. Elegant tabletops with a thickness of only 16 mm are used on the reduced frame with the striking legs. The standard castors allow easy movement and the 2:1 edge ratio enables positioning in many formations. Smart technology management can be integrated as an option.

## K Table System

The K Table System is our modular system for larger tables. Whether you need a surface for conference or meeting, and whether you want them at sitting or standing height, equipped with technical device management fittings or on casters for mobility – the K-Series offers endless options.

## Our work surface designs

Using our furniture system, you can create your own unique combinations of storage spaces and work surfaces. The options range from practical storage space for file storage, via our classic corner desk combination, up to and including the FlexDesk (p. 7), as a standing-height table designed for quick visits to the office.

# The Design Thinking Line®

Developed together with the HPI School of Design Thinking in Potsdam, the **Design Thinking Line® (DT-Line)** is consistently geared to the needs of dynamic teamwork.

## DT-Line Tables

The standing-height tables keep the team active. The optional StuffBoxes embedded in the table surfaces allow quick access to Post-its and writing utensils. On their second-level shelf, work materials are always at hand and the castors allow for easy movement around the room.

## DT-Line Boards

Magnetic and writable whiteboards in three different sizes hold ideas and work results in a simple way and can be positioned on castors wherever they are needed.

## DT-Line ToolRacks

The 6-step process of design thinking requires different materials depending on the phase. The semi-transparent boxes of the ToolRacks provide ample space for prototyping materials.

## SitRack

In agile working mode, employees are wanderers between the different zones of the Multi Space Office. With the SitRack, every employee has a mobile piece of furniture that not only offers a seat for the short, informal meeting, but also stores the most important personal items and office supplies in a practical box.

## SitUp

With its structure of stainless steel tubing and the three steps, the SitUp stand module is versatile, light and stable at the same time. Up to three people can sit on the three levels. With its low weight and two smooth-running furniture castors, SitUp can be easily moved, positioned and configured with several modules to form larger and smaller formations.
